EDUCATION

University of California, Berkeley

May 2024

Degree: Bachelor of Science in Electrical Engineering and Computer Sciences

Courses: Artificial Intelligence, Efficient Algorithms & Intractable Problems, Data Structures, Computer Architecture, Computer Security, Robotics, Database Systems, Operating Systems, Computer Graphics & Imaging, Printed Circuit Boards

EXPERIENCE

Salesforce

September 2024 - Current

Software Engineer

San Francisco, CA

- Built an agentic AI tool using browser-use to automatically triage, deduplicate, and reassign test failures across teams; implemented custom Python actions for parsing, conditional logic, data storage, and URL navigation.
- Engineered multi-provider LLM orchestration (OpenAI, Anthropic, Gemini) with token rotation; wrote extensive prompt instructions with complex guardrails to ensure reliable agent behavior.
- Designed and presented an admin-console permissions system to senior engineers and architects; authored design documentation, iterated through multiple reviews, and implemented least-privilege filtering using Salesforce User/Org Permissions.
- Owned end-to-end development of 10+ full-stack features including a dynamic Announcements homepage component with GraphQL queries, conditional rendering, and carousel UI (JavaScript, HTML/CSS, Apex, Java).
- Mentored 3 engineers and 1 intern; advised on architecture and reviewed code for a TypeScript project automating iOS crash log ingestion from Firebase to GUS.
- Integrated AI-assisted development into daily workflow using Cursor; leverage LLMs for code generation, debugging, refactoring, and test writing across a large enterprise codebase.

Salesforce

May 2023 - August 2023

Software Engineering Intern

San Francisco, CA

- Designed and implemented a Natural Language Processing (NLP)-powered chatbot using Salesforce Einstein Bot Builder; engineered 9+ intents with 150+ utterance variations each, integrated with Salesforce workflows for automated record creation, data retrieval, listing high-priority financial goals, and more.
- Used AI-assisted workflows to generate and refine utterance variations; iteratively tested and tuned NLP model responses to handle edge cases.

Benchmark Electronics

May 2021 - August 2021

Automation Engineering Intern

Concord, CA

- Programmed autonomous routines for a KUKA-KR22 robot arm; reduced cycle time by 5x on a previously manual process by automating tool switching, product deburring, polishing, picking and placing routines, and more.

UC Berkeley

August 2021 - May 2024

Network Manager (Co-op) & Academic Student Employee

Berkeley, CA

- Managed co-op network infrastructure for 150+ residents; taught 200+ students Python, NumPy, and circuit design.
- Built an RFID access control Arduino system; enabled verified residents to unlock the front door with student IDs.

PROJECTS

Animatronic Eyes | C, C++, Arduino, ESP32, KiCAD, TinkerCAD, Git

[Portfolio](#) | [Github](#)

Designed and programmed a pair of 3D printed eyes powered by a custom PCB that was able to detect and follow faces using an ESP32 microcontroller equipped with a camera and live webserver. Visuals and demo available on portfolio.

Discord Music Bot | Python, Amazon Web Services (AWS), Linux, Discord API, Discord, Git

[Portfolio](#) | [Github](#)

Implemented and deployed a Discord Bot capable of searching YouTube and SoundCloud to stream requested music into voice channels; hosted 24/7 on AWS EC2.

Game Jam Projects | Godot, GDScript

[Portfolio](#)

Developed and submitted 3 games with tight deadlines using AI-assisted coding workflows; placed 3rd in one competition.

Personal Portfolios | Javascript, CSS, HTML, Bootstrap, React, Git

[Portfolio](#) | [Github](#)

Developed an online portfolio showcasing my experience and personal projects and have since updated it.

Robot Arm Block Stacker | ROS, Python, Computer Vision

[Showcase Site](#) | [Github](#)

Programmed a 6-axis robotic arm to autonomously detect and stack blocks using ROS and computer vision.

TECHNICAL SKILLS

Languages: Java, Python, GO, Javascript, TypeScript, HTML/CSS, Apex, ROS, C/C++, C#, RUST, SOQL, GDScript

Technologies & Frameworks: Salesforce, React, Git, Node.js, GraphQL, AWS, VS Code, LLM APIs, NumPy, Jupyter

Developer/AI Tools: Cursor (240M+ tokens/year), browser-use, prompt engineering, LWC, ROS, IntelliJ, Netlify
